

# SURROUND YOUR TRUCK AND YOUR ASSETS!

Part of tracking your fleet and trailers is tracking what travels with your trailers. After all, tracking trailers alone only provides so much information. Other assets that should be tracked in order to truly surround your truck include:

## PALLETS, CONTAINERS, AND PRODUCTS

because understanding what is being shipped with each load ensures proper handling and timely delivery.

## CRUCIAL TOOLS AND EQUIPMENT

because having what you need while loading, unloading, or on the road lets you save time on the overall delivery process.

## THE ASSIGNED DRIVER AND TRUCK

because having a record of custody provides accountability and makes it easier to reach out if something goes wrong.

## SURROUND YOUR TRUCK, TRAILER, AND ADDITIONAL ASSETS WITH AIRFINDER

Link Labs understands the importance of tracking not only your trailer, but everything it contains. That's why our AirFinder Everywhere solution is designed to provide visibility for every asset traveling with your truck. When you outfit individual assets with any of our wide variety of asset tags, our system reports on what each trailer contains to provide a more complete picture of your logistics operations.

To learn more about how AirFinder provides visibility beyond just your trailer, visit our website or book a demo today!
