

# SUPERTAG

Innovative Indoor/Outdoor Asset Visibility

## Why the SuperTag?

-  Can sense location, shock, tampering, temperature, humidity, and more
-  Custom connectivity and update options for extended battery life
-  Produces reports to provide a historical audit trail
-  Seamlessly blends indoor and outdoor tracking
-  Easy to use and can be deployed in minutes
-  Variety of available models to best suit your needs

## Use Cases

Equipment & tool tracking

Supply chain management

WIP tracking

Inventory lifestyle tracking

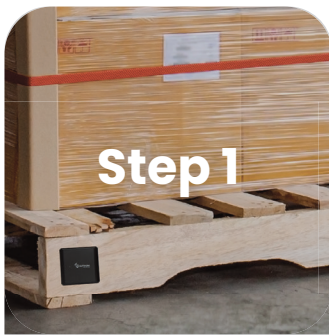

Loss Prevention

# The Innovative SuperTag

## How it Works

SuperTag is the asset tag aspect of our indoor/outdoor AirFinder solution. When attached to an asset, it monitors location data and any condition data that has been configured for the use case. This data can include temperature, motion, and humidity monitoring, as well as many other forms of tracking. The SuperTag helps you save money with its customizable connectivity and update rate options, which helps preserve battery life. It comes in a number of models, including a rechargeable option for extended use.

**Step 1**

Attach tags to individual assets.

**Step 2**

Set up IoT software.

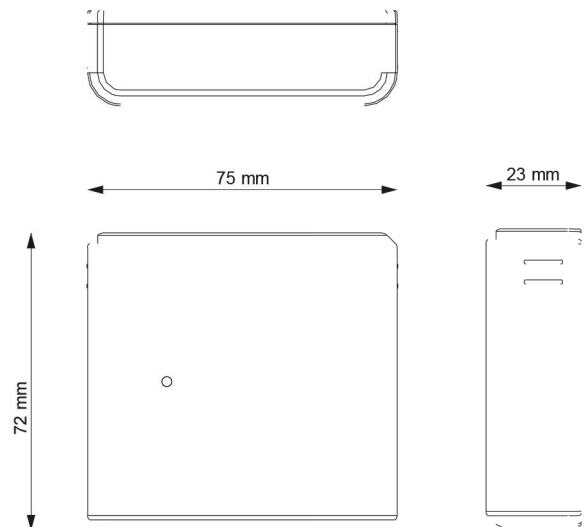

**Step 3**

Select location technologies.

**Step 4**

Determine how often the asset tags update.
