

AIRFINDER

SUPERTAG PLUS

PRODUCT OVERVIEW

The AirFinder SuperTag Plus is an advanced asset tracking device designed to provide seamless indoor-outdoor location data. With GPS, WiFi sniffing, and cellular ID for outdoor location, AirFinder SuperTag Plus's has the unique capability to seamlessly transition from outside into an AirFinder network for extremely low-power and refined indoor locations where AirFinder networks are installed.

KEY FEATURES

IP67 Water Resistant

Customized Label & Name Plate

Customer-definable

Geofences and alerts

Seamless indoor to outdoor location transitions

Accelerometer sensor

SPECS INFO

BASIC SPECIFICATIONS

Battery Type and Capacity	Lithium Manganese Dioxide 2300 mAh x 4
Operational Range	Up to 50m
Dimensions	118mm x 83mm x 34.3mm
Weight	250g
Water Resistance	IP67
Storage Temperature	-25° ~ 70°C
Operational Life	Up to 5-7 years
Applications	Accelerometer sensor

USE CASE APPLICATION

Trailer Tracking

The best way to optimize and exert control over fleet operations is to gain visibility of trailers. The SuperTag Plus can provide this visibility, helping fleet managers optimize overall supply chain operations by preventing delays and theft. All these efforts improve overall customer service.

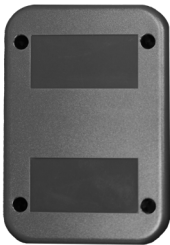

Pallet Tracking

Tracking pallets during transport helps ensure the cargo is loaded on the right trailer and is dropped off at the correct location. The SuperTag Plus can act as an access point to track each individual pallet on a trailer. If a trailer is missing, the SuperTag can send an alert about the missing pallet so the truck can pick it up immediately.
