

FILLING THE GAPS IN YOUR TELEMATICS SYSTEM

Telematics systems are crucial components of trucking and logistics, but they aren't designed to do everything. What can your telematics system do, and where does it fall short?

Telematics DOES:

- ✓ Provide real-time visibility while on the road
- ✓ Document route history and driver behavior
- ✓ Provide truck-centric monitoring

Telematics DOES NOT:

- ✗ Provide visibility for disconnected trailers
- ✗ Enable pallet-level condition monitoring
- ✗ Extend visibility to stages beyond transportation

Our AirFinder Everywhere system is designed to provide trailer and asset visibility where your telematics system can't! Our key features include:

Independent Power Source

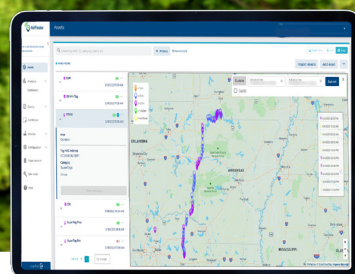

Our solution has its own power source, so it can provide visibility even when trailers are disconnected.

Versatile Asset Tags and Sensors

We utilize a variety of tags and sensors that can be affixed to individual pallets for improved condition monitoring.

Seamless Indoor and Outdoor Tracking

AirFinder Everywhere can be used anywhere both indoors and outdoors, enabling visibility on the road, within the warehouse, and beyond.

To learn more about how to integrate AirFinder with your telematics system, visit our website or book a demo today!
